Object From The Future

Quick guide: Object from the Future is a creative prototyping method that moves ideation from concept to concrete, by challenging a team to design a tangible artifact that would exist in a specific future scenario.

More tips & tricks on book page: 106

1 Map The Speculative Environment

What macro scenario, timeline, economic engine, and resource realities shape the world where this object exists?

2 Detail Artifact Architecture & Functions

What is the object called? What circular inputs, technical protocols, or data loops form its blueprint structure?

3 Everyday User Interaction & Systemic Disclosure

Describe how an actor interfaces with this artifact: What everyday need does it resolve? What unexamined ethical rules, social values, or system changes does its normalization reveal?

4 Ask "What if" Questions

Ask powerful "what if" questions explore the deeper consequences and the impact on the system-of-systems.
